How to configure MH Magazine WordPress Theme like the Demo

FAQ · https://mhthemes.com/support/knb/how-to-configure-mh-magazine-like-demo/

With MH Magazine you're using one of the most flexible and versatile magazine WordPress themes on the market. The integrated layout options and several unique custom widgets allow arranging layouts for basically any content genre without the need of changing the theme. To help you making use of this flexibility, we've created several theme demos which show what awesome websites you can create while using MH Magazine WordPress Theme.

Arranging Theme Options and Widgets like in the Demos

> **Important**: Please note that this tutorial shows how to arrange the widgets and configure the options of MH Magazine to replicate the look of the particular demos. If you are looking for general instructions regarding the installation and configuration of the theme, please refer to the theme documentation.

Before you can start making use of this tutorial, there are a few basics you need to know. This tutorial contains sections for each theme demo where you can find the instructions to replicate the layout of the particular theme demo by *making use of theme options*, *changing colors* and *placing widgets*. This workflow always is the same and we'll cover the steps in detail here:

- Making use of Theme Options
- Changing Colors
- Placing Widgets

Making use of Theme Options

MH Magazine WordPress Theme has several layout options included which you can use to change the look and feel of your website with only a few clicks in the theme options panel. To access the theme options panel, you can navigate to **Appearance => Customize => Theme Options** in your WordPress dashboard and arrange the settings like stated for the particular demo in this tutorial.

Changing Colors

To change the color scheme of your website, you can make use of the integrated color options in your WordPress dashboard under **Appearance => Customize => Colors**. In this tutorials you'll find the particular colors which have been used for each theme demo and you can simply copy & paste the color codes to your options panel to replicate the colors on your website.

Placing Widgets

In order to replicate the layout of the widgetized front page like seen in the theme demos of MH Magazine, it is essential and required that you have created and set a static front page correctly in your WordPress dashboard first and after that has been completed, you can place the widgets in your WordPress dashboard under **Appearance => Widgets** into the specific widget areas as stated for each theme demo in this tutorial.

> **Note**: If widgets don't appear on your front page after you have placed them correctly in your WordPress dashboard, then it's very likely that you haven't yet created a static front page properly and haven't assigned the widgetized *Homepage* template to your static front page as instructed in the theme documentation for MH Magazine WordPress Theme.

Replicate your favorite MH Magazine Demo

After you've made yourself familiar with how you can change theme options, colors and place widgets in your WordPress theme (see previous instructions), you can now start replicating your favorite theme demo by arranging the theme options, colors and widgets as stated for each particular theme demo below:
