Styles/scripts are not loaded properly

Troubleshooting · https://mhthemes.com/support/knb/styles-scripts-not-loaded-properly/

You may run into the issue that your product boxes/tables are being displayed completely un-styled. This often happens after installing the plugin on a new site or updating it to a newer version.

What's the problem?

You're using a plugin which minifies CSS/Javascript assets and the newly added/updated styles/scripts of this plugin are not added to the minify cache yet. This might come from a caching plugin (e.g. WP Rocket) or a standalone plugin like Autoptimize.

How-to solve it?

Simply empty/trash the minify cache. The proceeding itself depends on the plugin you're using. In general you will find an "Empty Minify Cache" link/button on the plugin settings page or the top admin menu.

Afterwards the styles/scripts should be loaded properly. In case you're still experiencing any issue, feel free to get in touch with us.
